FLO-DYNAMICS' A/C MODELS CCST288/388 MEET SAE J2788

ELKHART, IN AUGUST 22, 2006: Flo-Dynamics, a brand of Norco Industries, Inc., confirmed today that it will begin shipping two models of A/C service equipment that meet the new SAE J2788 standard in late October, 2007.

The new standard requires A/C equipment manufactured after December 31, 2007 to, among other things, recover 95% of a vehicles refrigerant and charge to an accuracy of +/- ½ oz.

Both models, the CCST288 and CCST388 are based upon technology Flo-Dynamics introduced with great success this past year. Both new models have enhanced "Intell-a-purge" and have new software to increase refrigerant recovery rates to over 95%. "The CCST288 and 388 have the same advanced feature set as their predecessors," remarked Chuck Abbott, Flo-Dynamics

~ MORE ~

Director of Business Development. "The CCST388 remains the only unit on the market with advanced features like automatic oil refill and options including A/C system diagnostics and automatic dye injection." Abbott continued.
